Career shift to software development from web design and development

Summary:

Programmer noted to have an eye for design as well as meticulous writing and coding skills. Web specialties included coding for website download speed, elastic coding, and responsive design and development beyond the grid. Photography and editing proficiencies were utilized in providing images for website design and content management. A background in caregiving and customer service as well as office positions and event center management honed skills in working independently. Strong aptitudes for learning and sharing have been illustrated through volunteering, participating in a local data science group dabbling in neural networks, Python, and Anaconda, and facilitating special interest groups via local in-person meetings as well as online international groups with topics ranging broadly including civil liberties, community assistance, the environment, alternative health, and personal development.
